## BCTF

2022-23

## BCTF Membership Survey

Summary Report, April 2023
This report presents a high-level summary of the first annual BCTF Membership Survey. Using a random sample methodology, the survey aimed to build a representative picture of teachers' lived experiences across the province during the current school year. The perspectives and experiences shared through the survey will help the Federation continue to advocate for the working and learning conditions teachers and their students need.

The first part of this report provides a snapshot of the teaching profession in BC's public education system during the 2022-23 school year.

The report then highlights five key findings from the survey:

1. Teachers are experiencing increasing workload and stress.
2. Teachers continue to experience challenges related to well-being.
3. The teacher shortage is significantly impacting students and teachers.
4. Teachers continue to perceive significant gaps in meeting students' needs.
5. Teachers feel most supported by their colleagues and local and provincial union.

The survey was conducted online from February 22 to March 12, 2023. The overall margin of error for the sample is $+/-1.7 \%$, 19 times out of 20.

## A Snapshot of Teachers in BC

The 2022-23 BCTF Membership Survey ${ }^{1}$ presents a snapshot of the teaching profession in BC public schools during the current school year.

- Sixty three percent ${ }^{2}$ of the respondents were classroom teachers, $23 \%$ specialist teachers and 7\% Teachers Teaching on Call (TTOCs). Other positions represented included Adult/Continuing Education Teachers (1\%), Distributed Learning Teachers (1\%), and District Coordinator/Helping Teachers (1\%).
- Most teachers $(74 \%)^{3}$ have a full-time continuing contract with their district.
- A majority of teachers $(60 \%)^{4}$ in BC have over 10 years of teaching experience, while $15 \%$ are in the first five years of their career.
- Being licensed as a teacher in BC requires completing an undergraduate program and a professional teacher education program. This survey found that, in addition to meeting these certification requirements, $38 \%^{5}$ of teachers also have their Master's degree, further illustrating how British Columbia's teachers are highly academically and professionally trained and certified. ${ }^{6}$
- The survey represents teachers across all grade levels, including adult/continuing education and distributed learning. The survey also represents teachers in all regions of the province. ${ }^{7}$

Furthermore, to better understand the diversity of teachers in BC, the 2022-23 BCTF Membership Survey asked several demographic questions related to race, cultural identity, ancestry, gender, sexuality, and ability or disability. Recognizing that surveys often provide set categories that do not fully capture who we are, teachers were invited to self-identify within particular categories as well as provide their own descriptors for their identities. ${ }^{8}$ The resulting data is a fluid representation of some of the identities of teachers in BC. The 2022-23 membership survey found that:

[^0]- Approximately one third (34\%) of teachers are between 45 and 54 years old. ${ }^{9}$
- Seventy seven percent ${ }^{10}$ of teachers in BC identify as women, $21 \%$ as men, $1 \%$ as nonbinary and $1 \%$ preferred to self-describe. Broadly, this continues a general upward trend in the number of female teachers over the past 15 years, from 62\% in 1991-92. ${ }^{11}$
- Seven percent of teachers identify as a person living with a disability or a disabled person. ${ }^{12}$ This is substantially lower than findings from the 2017 Canadian Survey on Disability which found that $20 \%$ of working age adults had a disability. ${ }^{13}$ The lower rate found through self- identification in this survey may point to the ongoing stigma faced everyday by people with disability/disabled persons and potential barriers to a career in education. ${ }^{14}$
- Three percent of teachers identify as Aboriginal or Indigenous (First Nations, Metis, Inuit). ${ }^{15}$ This is slightly lower than the estimated 4\% to 6\% of teacher education graduates per year who are Indigenous, ${ }^{16}$ and points to the ongoing underrepresentation of Indigenous teachers within BC's public education system.
- Provincially, $17 \%$ of teachers identify as a racialized person or a person who has experienced racism. ${ }^{17}$ This rate varies by region across the province. For example, $27 \%$ in Metro West Region identified as a racialized person or a person who has experienced racism, whereas the percentage becomes nine percent (9\%) in the North Coast Region.
${ }^{9} \mathrm{n}=3,009$; See Appendix C, technical table 1.
${ }^{10} n=3,003$; See Appendix C, technical table 2.
${ }^{11}$ Historical analysis relies on how the Ministry of Education has classified teacher statistical data related to gender using the binary categories of "male" and "female." As stated in guidance released in April 2018 from Statistics Canada, sex and gender are distinct concepts. Furthermore, gender identity occurs along a spectrum and can change over time.

## Key findings from the 2022-23 BCTF Membership Survey

Key finding 1: Teachers are experiencing increasing workload and stress
Data from the 2022-23 BCTF Membership Survey strongly supports anecdotal evidence that teachers in BC are experiencing increasing workload and that this is taking its toll. A majority of teachers ( $64.1 \%$ ) report that their workload is greater now compared to a year ago. Similarly, $65.5 \%$ of teachers are experiencing more stress this year.

Figure 1: Overall workload compared to last year ${ }^{18}$

[^1]

Figure 2: Overall Level of Stress Compared to Last Year ${ }^{19}$

Comments from teachers illustrate some potential causes and impacts of increasing workload and stress. For instance, one teacher with over 20 years of experience linked increasing workload to how the "role of a teacher has dramatically changed" and "teachers are expected to do more and more." This can cause teachers to become "burned out" and "cynical and uninspired by a profession that is undervalued and a workload that is unreasonable." Another teacher described the emotional costs of "insufficient preparation time" and feeling like they are unable to "do anything well, or as well as I would like," stating that they "love teaching children" but "I just don't know if I can do it anymore."

Teacher burnout and stress have significant impacts both personally and within the broader school community. For example, one teacher "experienced severe burnout" and "decided to give up my regular classroom position and went back to TTOC work" at a significant cost of pay and seniority, as well as feeling that they "very much miss my regular students." Others have moved "into the classroom from the position of inclusive education support teacher due to burn out." Another described how teachers at their school are "experiencing very high stress levels" and there are "more teachers on sick leave than ever before." Furthermore, increasing workloads, alongside a lack of recognition of this work, can lead to those who "don't feel respected at all as a professional" and a fear that "we will lose experienced teachers and that the gaps students already face will continue to grow."

[^2]Key finding 2: Teachers continue to experience challenges related to well-being
The 2022-23 BCTF membership survey asked teachers about their current physical and mental health, as well as how those compared to last year.

In terms of physical health, while roughly half (45.4\%) report good or very good physical health, $40.5 \%$ report that their physical health is worse now than it was last year (See Figures 3 \& 4). In turn, only approximately $1 / 3$ of teachers ( $37.3 \%$ ) report a good or very good state of mental health, and $40.4 \%$ report that their mental health is worse now as compared to last year (See Figures 5 \& 6).

Q: How would you describe your current physical health?

Very poor $\square$ Poor $\square$ Fair $\square$ Good
Very good

Figure 3: Current physical health ${ }^{20}$

[^3]Q: How would you say your physical health is now compared to this time last year?

Figure 4: Physical health compared to last year ${ }^{21}$

Q: How would you describe your current mental health?

Figure 5: Current mental health ${ }^{22}$

[^4]

Figure 6: Mental health compared to last year ${ }^{23}$

These findings continue a worrying trend of declining well-being among teachers. Research conducted by the UBC Human Early Learning Partnership (HELP) in 2021 asked BC teachers to report on the state of their mental health, in comparison to before the COVID-19 pandemic. At that time, the vast majority of teachers (80.5\%) reported slightly or significantly worse mental health. ${ }^{24}$ This was significantly higher than general declines in mental health among the Canadian population. While the findings from this survey related to teachers' mental health are not as stark as the HELP survey in 2021, conducted in the height of the COVID-19 pandemic, the reported impacts on mental health are a trend that has been documented in multiple well-designed surveys of BC teachers over the last few years.

The impacts of poor mental and physical health are felt across the public education system. As one teacher commented, "we need to make mental and emotional health a priority for all because without it, no one can be healthy in other ways. We cannot teach and learn effectively when our health is at risk in any capacity."

[^5]
## Key finding 3: The teacher shortage is significantly impacting students and teachers

$B C$ is experiencing major demographic shifts that are creating an increasing demand for teachers and critical personnel shortages. These shortages have a direct impact on students and teachers. Specifically, the 2022-23 BCTF Membership Survey found that 81.5\% of teachers have been directly impacted by staffing shortages at their school or district. ${ }^{25}$ Teachers identify the number one impact of these shortages as being "not able to get necessary support for my students." In addition, losing preparation time, a greater workload, not taking needed personal/sick days and being pulled away from regular assignments to provide internal coverage are top impacts (see Figure 7).

Q: What are the three biggest impacts of staffing shortages on your work as a teacher? Choose up to three.

Figure 7: Impacts of staffing shortages ${ }^{26}$
Comments shared by teachers in the survey illustrate the lived realities of these numbers. Teachers are concerned that there are gaps in student learning due to inconsistent or uncertified staffing, or

[^6]emergency coverage by teachers with limited subject/grade level experience. For some teachers this means being "placed in an assignment that I wasn't ready for" or working in classes that "have been combined due to failure to fill TTOCs."

Staffing shortages particularly impact students with disabilities or diverse needs as teachers find themselves "unable to access the supports my students are entitled to." Sometimes this occurs because "learning assistance (LSS) and ELL [English Language Learning] teachers are made to do internal coverage when teachers are sick instead of being able to work with students."

The lack of available TTOCs and Educational Assistants (EAs) can also lead to "no predictability, continuity or dependability" that impact all students as well as teachers. Teachers expressed concern about what happens to both their colleagues and students if they are away, and the "guilt when no TTOC is dispatched, and services have to be cancelled." Even if a TTOC has been arranged, teachers working in that role described how "my TTOC assignment changes when I arrive at school" and being "shuffled" to try to cover other absences.

While the current teacher shortage was identified as early as 2017, in the Minister of Education's Task Force on Immediate Recruitment and Retention Challenges, ${ }^{27}$ most recommendations from that task force's report have still not been implemented and challenges to teacher recruitment and retention have been exacerbated by the ongoing COVID-19 pandemic. ${ }^{28}$

Also, of concern for the retention of current teachers, the 2022-23 BCTF Membership Survey found that $16.2 \%$ of teachers say that it is unlikely that they will be teaching in two years' time (See Figure 8).

[^7]Q: How likely is it that you will still be teaching in the $B C$ public education system in two years time?

Figure 8: Likely to be teaching in the future ${ }^{29}$

While some turnover is expected with planned retirements (listed in this survey by $33.8 \%$ of those respondents who said they were likely to leave teaching), the number one reason pushing teachers from the profession is inadequate working conditions (53.4\%; See Figure 9). Conversely, 46.5\% of teachers who see themselves staying in teaching listed working conditions as a key motivator. ${ }^{30}$ This supports the findings from previous academic research that has found a direct connection between working conditions and teacher recruitment and retention. ${ }^{31}$ It also necessitates reframing "the teacher shortage" as a crisis in working conditions.

This finding is also about students' learning conditions. As Basia and Rottman argue, it is important to understand "teaching conditions and students' opportunities to learn in mutually reinforcing ways" (p. 796). ${ }^{32}$ Approximately one third of respondents $(35.6 \%)^{33}$ who said they were likely to leave teaching in two years listed the lack of support for students with disabilities/diverse needs as a key factor. This is a gap that came out in the fourth key finding of the survey.

[^8]Q: You indicated you might leave teaching within the next two years. Of the following, what are the three most important factors influencing your thoughts of leaving? Choose up to three.

Figure 9: Top three reasons to leave teaching ${ }^{34}$

[^9]Key finding 4: Teachers continue to perceive significant gaps in meeting students' needs
When asked to what extent their students' needs are being met during the 2022-23 school year, only approximately one quarter of teachers feel that students' academic (24.8\%) or social and emotional (21.9\%) needs are being met completely or very much (See Figures 10 \& 11).

While this speaks to ongoing support needed for all students, it is even more acute for students with disabilities or diverse needs. For this group, only $13.1 \%$ of teachers feel that students' needs are being met, with half (49.7\%) stating that these students' needs are only slightly being met or not met at all (See Figure 11).

Figure 10: Extent of meeting students' academic needs ${ }^{35}$

[^10]Q: To what extent do you feel your students' social and emotional needs are being met during this school year?

Figure 11: Extent of meeting students' social and emotional needs ${ }^{36}$

Figure 12: Extent of meeting students' disabilities or diverse needs ${ }^{37}$

[^11]Many of the comments provided by teachers in the survey are about the gap in meeting students' needs. One teacher described being "appalled at the lack of support for students with special learning needs in my class this year and in the school as a whole." Teachers pointed to multiple factors driving this gap in support, including: "not enough funding to provide enough EA support in the classroom;" a lack of "paid prep time" to plan for diverse needs; "an overwhelming amount of students with particular needs in each class;" a lack of targeted support for specific medical diagnosis, such as students who have ADHD [who] are still not supported by our public education system;" significant "hoops that need to be gone through to get a student designated;" a lack of "mental health care professionals in the school system;" a "lack of programming for special needs students with significant needs (i.e. non-verbal, intellectually disabled, physical challenges, developmental delays);" and, a lack of funding for "early intervention and early learning." Across these factors is the stark reality that "funding for inclusive education continues to be mediocre."

These findings point to the urgency of districts receiving funding to meet all student needs. Currently, school districts receive supplemental funding only to cover the additional needs of students with so-called "low incidence" designations. However, about half of students with an identified need are designated with a "high-incidence" designation, which is accompanied with no additional funding. This has created a situation where districts receive substantially less in supplemental education funding than what they actually do, or need to, spend. ${ }^{38}$

[^12]
## Key finding 5: Teachers feel most supported by their colleagues and union

Access to social support is well recognized as a social determinant of health. Within the 2022-23 BCTF Membership Survey, teachers reported feeling the highest level of support from colleagues ( $91.7 \%$ strongly or somewhat agree), their local union (77.6\%) and the provincial union (72.8\%). Conversely, teachers reported feeling a lack of support at a district and provincial level, with the Ministry of Education receiving the lowest perception of support (only 26.1\%; See Figure 13).

Previous research with teachers in BC has illustrated the positive relationship between sources of support and teacher well-being as well as teacher retention. ${ }^{39}$ This positive relationship is corroborated within the 2022-23 BCTF Membership Survey, ${ }^{40}$ reinforcing the importance of building and maintaining positive and collaborative relationships across the school community. For example, there is a statistically significant relationship between reported mental health and perceptions of support from principals/school-based administrators. As one teacher explained, "teachers at my school feel they are not supported by admin. or senior admin. (especially female teachers). As staff rep, I notice teachers are much more stressed this year than ever before."

Conversely, another teacher shared that "strong connections between staff, and also strong support from admin have been invaluable this year. Unity in our intention to making sure the students' (and staff's) mental health needs come first has made a huge difference in our ability to work well for the kids."

[^13]Q: During the current school year, to what extent do you agree that you feel supported by the following?

My colleagues
My local union

Figure 13: Perception of being supported ${ }^{41}$

## Thank you

BCTF Research would like to sincerely thank the teachers who took the time to share their perspectives and experiences as a part of the 2022-23 BCTF Membership Survey. As the first annual survey, results provide an important baseline for understanding working and learning conditions in BC public schools. Gathering this data on an annual basis will allow the Federation to track and respond to key trends over time.

Further to this summary report, BCTF Research will be working with the survey results to provide timely and representative data based on the BCTF leadership and advocacy priorities over the coming school year. For questions, please contact research@bctf.ca.

## Appendix A: Methodology

The 2022-23 BCTF Membership Survey was conducted online from February 21 to March 12, 2023. The BCTF Research Department (BCTF Research) designed the survey, drawing on the leadership priorities of the Federation and previous survey results related to teachers' well-being and working conditions. The aim of the survey was to gather statistically representative data to inform the Federation's advocacy for the working and learning conditions that teachers and students need.

BCTF Research contracted Leger, the largest Canadian-owned market research and analytics company, to host the survey and provide a brief report on overall results. Leger is bound by 1) federal privacy rules, regulations, and standards imposed by the Personal Information Protection and Electronic Documents Act (PIPEDA); 2) the Canadian Research Insights Council (CRIR), the industry association for the market/survey/insights research industry; and 3) European Society for Opinion and Market Research (ESOMAR), the global market research industry association.

Unique survey links were emailed to a random sample of all active BCTF members (39,558 as of February 2023), ${ }^{42}$ weighted by district. Prospective respondents received an email invitation, as well as a voice message and email reminders. The survey was anonymous and took approximately 10 minutes to complete.

The sample of 13,053 potential respondents resulted in 3,068 completed surveys, 23 terminated, and a response rate of $24 \%$. Respondents were free to skip questions, in whole or in part, with the exception of the required screening member status question. Consequently, the number of completed responses varies by question. The results summarized in this report come from the final analytical sample that is made up of 3,068 currently working BCTF members after initial data cleaning. The methodology used allows generalization of the results to the overall teaching population in BC's public schools with reasonable accuracy and a small margin of error: $+/-1.7 \%$, 19 times out of 20 .

Percentages in this report have been rounded to the first digit after the decimal point, except for demographic information which has been rounded to the closest whole number.

Further to this summary report, BCTF research will be using the results to provide timely and representative data based on the BCTF leadership and advocacy priorities over the coming school year. For questions, please contact research@bctf.ca.

## Appendix D: Correlation Table

Table 1
Bivariate correlations between each type of support and status of mental health, physical health, and teaching retention.

|  | Mental <br> Health | Physical Health | Keeping <br> Teaching |
| :---: | :---: | :---: | :---: |
| Type of support | $r$ | $r$ | $r$ |
| Principal \& School Admins | .27** | .16** | .19** |
| School Board | .27** | .16** | .19** |
| Superintendent \& District Admins | .27** | .16** | .14** |
| BC Ministry of Education | .25** | .18** | .15** |
| Local union | .18** | .10** | .11** |
| Provincial Union (BCTF) | .19** | .10** | .14** |
| Colleagues | .17** | .11** | .11** |
| Parents \& Community Members | .19** | .14** | .14** |

Note. **indicates correlations significant at the 0.01 level (2-tailed).

[^0]:    ${ }^{1}$ See Appendix A for a full description of the methodology. The number of responses (i.e., $n$ ) varies by question and is specified in the footnote. All percentages here are calculated using the actual number of responses without counting the null and "not applicable", except for a few questions as specified in Appendix B, technical table 4, 14, 15 and 17, whereas the percentages in the Appendix B and C are calculated Including null and "not applicable", so there might be a slight discrepancy between the two.
    ${ }^{2} \mathrm{n}=3,068$; See Appendix B, technical table 2.
    ${ }^{3} n=3,229$; See Appendix B, technical table 3.
    ${ }^{4} n=3,068$; See Appendix B, technical table 5 .
    ${ }^{5} n=3,068$; See Appendix B, technical table 6.
    ${ }^{6}$ learningforward. (2017). The state of teacher professional learning: Results from a nationwide survey. /https://learningforward.org/report/professional-learning-canada/
    ${ }^{7}$ Teachers from every school district responded to the survey. However, given small sample numbers within smaller districts, it is not possible to provide representative analysis by district. Data will be grouped into regions for future analysis. See Appendix B, technical table 1 and table 4.
    ${ }^{8}$ Recognizing shifting terms used to describe sexual identities; teachers were invited to self-describe their sexual identity. Furthermore, in response to the invitation to elaborate on which race, cultural identities, ethnicities, or ancestry they belong to, teachers shared diverse identifications. These open-ended answers will be explored further in future analysis.
